Summary

Junior backend / full-stack developer with a background in QA automation and hands-on experience building and deploying full-stack JavaScript applications.

Developed and deployed a production-style task management application using React, Node.js, Express, and PostgreSQL, demonstrating REST API design, relational database modeling, integration testing, and end-to-end testing.

Experience working in a team-based development environment using Agile practices, Jira, and collaborative workflows on a real-world ERP-style application.

Focused on backend development, API design, and building reliable, testable systems.

Skills

Languages: JavaScript, TypeScript (basic), HTML/CSS

Frontend: React

Backend: Node.js, Express, REST APIs

Databases: PostgreSQL, Prisma ORM

Testing: Jest, Supertest, Postman, Cypress, Playwright

Tools: Git, GitHub, npm, VS Code, CI/CD (GitHub Actions)

Technical Focus

Backend development with Node.js and Express

REST API design and relational database modeling

Automated testing and API validation

Building maintainable full-stack JavaScript applications

Experience

Software Engineering Trainee (QA / Product Support)

2026 – Present

PASV Bootcamp (Kompot AI Project)

Remote

- Contributing to an AI-powered CRM/ERP SaaS platform integrating client management, communications, and business workflows.
- Performed manual testing of features across the system, identifying bugs, edge cases, and inconsistencies in business logic.
- Created structured bug reports in **GitHub**, clearly documenting reproduction steps, expected vs actual behavior.
- Collaborated with developers to validate fixes and improve overall product quality.
- Worked with real-world business workflows involving customer data, communication flows, and transaction logic.
- Participated in weekly team syncs and async discussions to align on issues and priorities.

Software Engineering Trainee

2024

PASV Bootcamp (Project-Based)

Remote

- Contributed to a team-based ERP-style application designed to manage business workflows and structured data.
- Worked in an Agile environment using **Jira**, participating in stand-ups and sprint-based development.
- Implemented assigned tasks including feature development and bug fixes using **JavaScript**, **Node.js**, and **React**.
- Collaborated with team members on task execution, discussions, and code reviews.
- Integrated and consumed **REST APIs**, handling data flow between frontend and backend.
- Debugged application issues across multiple layers, improving reliability and functionality.

Projects

Task Manager – Full-Stack Application

2026

GitHub: github.com/OchirovAleks/task-manager — *Live:* task-manager-gamma-five-66.vercel.app

- Built and deployed a full-stack task and project management application using **React**, **Node.js**, **Express**, and **PostgreSQL**.
- Implemented a RESTful API for projects and tasks with full CRUD functionality.
- Designed relational database schema using **Prisma ORM** and managed schema changes with migrations.
- Implemented cascading delete behavior between projects and tasks at the database level.
- Developed integration tests using **Jest** and **Supertest** to validate API behavior and database interactions.
- Implemented end-to-end tests using **Playwright** to validate full user workflows across the deployed application.
- Designed modular backend architecture with dependency injection and separation of concerns.
- Implemented centralized error handling middleware for consistent API responses.
- Deployed application using **Vercel** (frontend), **Render** (API), and **PostgreSQL** (cloud database).
- Configured environment variables for production API communication between frontend and backend.
- Set up CI pipeline using **GitHub Actions** to run tests and validate builds on every push.

Education

PASV Bootcamp

2024

QA Automation Training

Irkutsk State Medical University

2015 - 2021

Doctor of Medicine
